

Pool Wire

Pool Wire (also commonly known as Steeltex), is a paper-backed wire mesh and is used in the construction and forming of in-ground swimming pools. Applied after framing, pool wire provides a waterproof barrier, helps stabilize the excavated pool area, and provides a secure backing for the concrete and limits concrete waste.

- Wax-coated with glass reinforcing fibers embedded in the paper for additional strength
- Kraft paper combined with cloth woven from complex PVC flat threads, weight is 155 165g/m²
- Very flexible for use in swimming pool construction as a form for gunite buildup
- 16- gauge and 12- gauge electrically galvanized welded mesh
- Supplied in rolls 48" wide x 125' long for a total of 500 square feet
- Also suitable for other free form applications such as miniature golf courses or stucco framing
