THE UNDER WATER WALKER™

The Under Water Walker can be used in two ways. It can be used in its standard configuration without arm cradles that allows a person to use it as they would a normal walker, by gripping onto the horizontal cross supports and supporting themselves using their hands (see photo below, left) or it can be used with the arm cradles that allow the user to rest their forearms on the horizontal cross supports and brace their body using their forearms.

STANDARD WALKER

WALKER WITH ARM CRADLES

The Aqua Creek Products' Under Water Walker has been designed to provide the user ultimate comfort and adjustability. Before using the Under Water Walker review the diagram below and familiarize yourself with the parts and features of the walker.

ADJUSTING THE UNDER WATER WALKER™

The Under Water Walker is easily adjustable for height. It is adjustable in one-inch increments from 32" to 45", measured from the floor to the armrests. To adjust the height;

- 1] Remove the four (4) 5/16" snap-pins.
- 2] Slide the Upper Assembly up or down until the desired height is obtained.
- 3] Replace the four (4) snap-pins and snap the clip over the pin to hold it in place.

HINT: Count the holes from the bottom up to the desired hole/location to make sure all four snap-pins are at the same height. If the armrests/arms aren't level adjust the snap-pins until they are (pins in same height-number hole).

HEIGHT ADJUSTMENT FOR ARM-CRADLE USE

To use the Under Water Walker with the armrest cradles the height should be adjusted so that the arms are bent 90 degrees at the elbow and the cradles are at elbow height for maximum comfort. Adjust the height (see “ADJUSTING THE UWW”) until the armrests are as shown in the photo below. This configuration gives the user the maximum amount of support and can be used for patients and users that need extra support.

CONVERTING THE WALKER TO STANDARD

The Under Water Walker can be used with the armrest cradles, or the armrest cradles can be removed for use as a “standard” walker. To convert the Under Water Walker to a standard walker, follow the following steps;

- 1] Remove the four (4) Wing Nuts from underneath the armrests (no tools required).
- 2] Remove the four (4) 1/4" x 2-1/4" Button-Head Cap Screws from the Cradles.
- 3] Remove the Armrest Cradles. Save the Cradles and the hardware for reattachment.

THE STANDARD CONFIGURATION WALKER:

In the “Standard” configuration the armrests become hand grips, as shown in the photo. To use the Under Water Walker in the standard configuration it must be adjusted lower so that the arms are slightly bent at the elbow when walking. In any case, adjust the height for optimal comfort before using.
