

Medium Lava Rock

Product ID: LAVA-M-10
Weight: 10.0000 lbs
Manufacturer: American Fire Glass

Medium Lava Rock

Any amazing gas fire feature begins with a proper and solid base. You can use fire glass or fire stones in your fireplace alone, but for deep set fire pits it is best to lay down a lava rock base. Not only is it lighter weight by mass (ten-pound bag of lava rock will fill as much area as twenty pounds of fire glass) but is more cost effective for your fire pit project.

This material can be utilized inside and out and can withstand high temperatures in any fire feature because of the natural process magma goes through when cooling. As the magma nears the surface and cools, the rock releases gas bubbles that forms the coarse rough surface in the lava rock.

These medium sized rocks are 1/2 an inch to 1 inch in sizes and vary in color from brown to black, this is normal.

Whether lava rock is your base covering or you choose to use only it in your fire feature, you are purchasing a material that is durable and long-lasting. Of course, you may decide you like the look of the lava rock by itself, especially if you are creating an outdoor fire pit or you have a more tropical theme established in your décor.

Medium Lava Rock Specifications

- **Material:** Lava rock
- **Size:** 1/2" to 3/4"
- **Color:** Brown to black
- **Weight:** 10 Lbs.
