

No-Niche® Skimmer

The Skimmer That Operates Without A Niche

No-NICHE® is no ordinary skimmer. It replaces the need for a niche - the weakest point in a pool's construction. Constructing a niche can substantially increase the cost of a pool. Operating in a confined niche, conventional skimmers often don't do an adequate job of keeping a pool clean. The No-NICHE® has a flow rate of 52-55 gallons per minute.

No-NICHE® is efficient. With 360° skimmer actions, No-NICHE® has sufficient skimming power to allow opening of the main drain. Water filters faster, keeping the pool cleaner. No-NICHE® works on a floatation system that automatically adjusts to average water level changes.

No-NICHE® is compact. It does a big job while remaining unobstructive and almost invisible. No-NICHE® utilizes an exceptionally large skimmer basket considering its compact size to filter more debris without clogging. It can be used in new pool construction, with existing VAC outlets, or in place of an inefficient skimmer.

No-NICHE® is constructed from ABS plastic for strength and durability. It comes complete with a vacuum fitting (No. 752). With the basket and float removed, the hose fitting attaches to the hose and the bottom of the skimmer without threading.

No.750

NOTE: AMERICAN VAC PLATE WORKS ON NO-NICHE®. (No. 920)

- No. 750** Complete Assembly
- No. 751** Top and Main Housing
- No. 752** Vacuum Fitting
- No. B-13** Basket Only
- No. B-38** Skimmer Weir

**Also available in
Black ABS for KOI ponds. (No. 750B)**
