

Locking Lid Vac-Master

LOCKING LID VAC-MASTER

The Locking Lid VAC - MASTER can be used when vacuuming, as a conventional skimmer plus the locking lid feature allows the VAC - MASTER to work with automatic pool cleaners. The VAC-MASTER works by inserting into the skimmer and attaching the vacuum hose.

The VAC - MASTER has a clear lid which allows easy access to remove collected debris while allowing the skimmer continuous operation with the cleaner. VAC - MASTER can save valuable time by catching all large debris for easy removal at the skimmer rather than at the pump.
