

Pulsar® Customizable Skid System

Containment And Convenience

Pulsar® Feeder Housing Systems

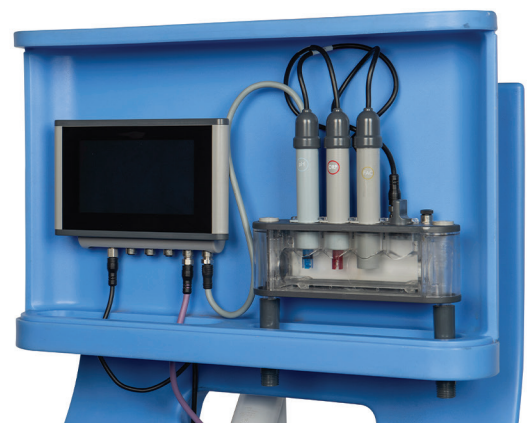

Easy to install, designed with forklift cutaways, and featuring skid pump mounting - our skids are the ideal feeder housing system. With flexible configurations to meet site requirements, installations can include pump, controller, dual feeders or feeder plus chemical storage - all with spill containment a critically important component of our design.

- » Easy installation
- » On-skid pump mounting
- » Purpose-built for spill containment
- » Customized installations to your site requirements
- » Installations can include pump, controller, dual feeder or feeder plus chemical storage
- » Designed with forklift cutaway

Splash-Free Solutions Simplify Storage And Reduce Damage

Pulsar Commercial Pool Solutions feature dry chemicals that stay dry until water enters the feeder, so no splashing (which causes damage to vehicles and pump rooms). Easy to store customizable housing systems can be configured to meet your individual site requirements and our automatic feed system options require minimal operator dosage adjustments. All that's needed is storage off the ground in cool, dry, well-ventilated areas.
