ADVANCED HOT TUB WATER CARE

Fall in love with your hot tub all over again.

Tired of complicated potions, soaking in chemical soup and feeling like you need a degree in chemistry just to own a hot tub?

We've got something better.

And, it's going to make you fall in love with your hot tub all over again.

***Mineraluxe.*** It's the way hot tub care was meant to be. Luxurious. Healthier. Simpler.

## We believe that...

...hot tubs should be healthy places to relax and enjoy good company

...water care products don't have to be scary potions

...you should be able to inhale while you enjoy your hot tub

...and exhale knowing that Mother Nature had a hand in making your water as healthy and natural as possible

Think of us as the anti-chemical soup company. What turns our crank every day is making products and water care systems that not only work to make water dazzling, but also create healthier, more comfortable water.

***Our approach to water care boils down to this:*** Finding ways to make your hot tub water look, feel and smell better ***by removing stuff from the water***, instead of adding more and more scary things in.

The funny thing is, when you design products to be healthier and more natural, they turn out to ***be better for the environment as well***. Go figure!

But enough about us. Let's talk about your hot tub.

# Getting Started on the *Mineraluxe System*

First of all, congratulations on selecting the ***Mineraluxe System!*** Here's your guide to how to start up your hot tub and keep it running smoothly. We'll try to keep it as simple as possible, but if there's anything you need to know, just let your ***Mineraluxe*** retailer know. We're happy to help.

**Your best bet is to start the *Mineraluxe System* after a thorough cleansing, draining and cleaning of the hot tub and filter cartridge.** The steps to take to accomplish this are as follows:

1. Cleanse the pipes. ***Mineraluxe Cleanse & Drain*** will cleanse the hot tub, surfaces, jets and piping of junk (that yucky build-up of oils, greases, organics, etc.). Follow the directions on the bottle for best results. It's best to apply Mineraluxe Cleanse & Drain 24 – 48 hours prior to draining.
2. Clean the surfaces. Use ***Dazzle Tub Cleanse*** to thoroughly clean above the water line and the underside of the cover. Follow label directions.
3. Clean the filter. Use ***Mineraluxe Filter Revive\**** to thoroughly cleanse your filter cartridge prior to re-use.

So, what if you recently drained and cleaned your hot tub? Just go ahead and get started on the ***Mineraluxe System.***

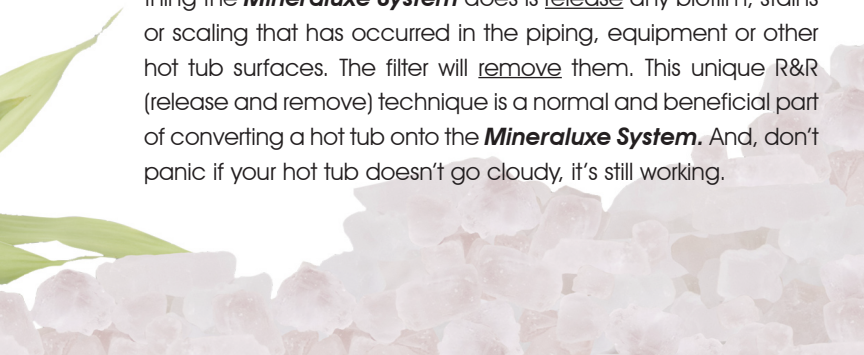

## ***This is Really Important***

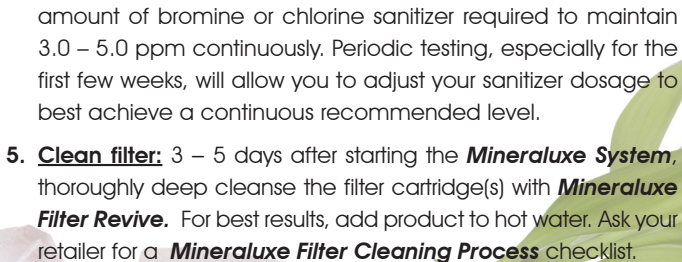

Part of what makes the **Mineraluxe System** work so well is that it's got some pretty intense biofilm and scale removing properties. So, you may see some sloughing of scale and/or biofilm back into your hot tub water within the first few days of use. If this happens, it's a good thing because it's taking that stuff out of your hot tub! Just continue to operate your hot tub normally, rinse off the filter cartridge every day and the water will clear after a short period of time (1 – 3 days). If the water is cloudy, always make sure there is between 3 to 5 ppm of sanitizer, as insufficient sanitizer is another key reason hot tubs go cloudy.

## Starting on the **Mineraluxe System**

'Cause we love to repeat ourselves, we want to remind you that the hot tub water may go cloudy for 1 to 3 days after starting on the **Mineraluxe System**. Trust us, that's a good thing! The first thing the **Mineraluxe System** does is release any biofilm, stains or scaling that has occurred in the piping, equipment or other hot tub surfaces. The filter will remove them. This unique R&R (release and remove) technique is a normal and beneficial part of converting a hot tub onto the **Mineraluxe System**. And, don't panic if your hot tub doesn't go cloudy, it's still working.

## First Week on the *Mineraluxe System*:

1. **Add Mineraluxe CUBE:** Add two **Mineraluxe CUBES** for tubs up to 2,000 L. If your hot tub is heavily used or greater than 2,000 L, check with your retailer for an adjusted application rate. Just drop the **Mineraluxe CUBE(S)** right into the skimmer basket. If you don't have a skimmer, just drop the cube into the foot well near the drain. **Mineraluxe CUBES** dissolve quickly (you'll see some cool fizzing action) and will not harm surfaces.
  2. **Add the contents of one pouch of Mineraluxe OXYGEN** per 1,500 L. **Mineraluxe OXYGEN** can be added immediately after the addition of the **Mineraluxe CUBES**. Turn the high speed jets on for 15 minutes to thoroughly disperse the **OXYGEN** throughout the tub. Make sure to leave the cover off to allow the impurities in the water to gas off!
  3. **Balance the hot tub water.** Your **Mineraluxe** Retailer can help you get your water's Total Alkalinity, pH and Calcium Hardness within the acceptable ranges.
  4. **Establish a bromine or chlorine residual of 3 - 5 ppm.** Healthy hot tub water is properly sanitized. One important benefit of the **Mineraluxe System** is the ability to significantly reduce the amount of bromine or chlorine sanitizer required to maintain 3.0 – 5.0 ppm continuously. Periodic testing, especially for the first few weeks, will allow you to adjust your sanitizer dosage to best achieve a continuous recommended level.
  5. **Clean filter:** 3 – 5 days after starting the **Mineraluxe System**, thoroughly deep cleanse the filter cartridge(s) with **Mineraluxe Filter Revive**. For best results, add product to hot water. Ask your retailer for a **Mineraluxe Filter Cleaning Process** checklist.
- 

## Regular Maintenance on the *Mineraluxe System*:

1. **Once a Week: Add one *Mineraluxe CUBE* per 2,000 L (add it to the skimmer or drop it to the bottom of the hot tub) and one pouch of *Mineraluxe OXYGEN* per 1,500 L.** Turn the high speed jets on for 15 minutes to thoroughly disperse the OXYGEN. Make sure to leave the cover off!
2. **Maintain chlorine or bromine level of 3 - 5 ppm** and add chlorine or bromine as needed. Test your bromine or chlorine residual regularly and adjust as needed to maintain the required level as per Health Canada's recommended levels of 3.0 – 5.0 ppm.
3. **Maintain pH between 7.4 and 7.6.**
4. **Rinse filter cartridge once a week with water.**
5. **Deep clean cartridge with *Mineraluxe Filter Revive\** once a month.**

It's happened. You've fallen in love with your hot tub...all over again!

That's all there is to the **Mineraluxe System**. Oh yeah, one more thing. Once a month is date night... with your **Mineraluxe™** Retailer. Some people love getting flowers on date night. Call us crazy, but we love getting water samples. So, once a month and whenever you drain and refill the tub, grab a water sample and come on in to see us for your free AquaAce Personalized Prescription.

We'll check on your water and make sure it's still happy. (And that you are too!). In the meantime, if you have any questions or concerns, call us or come on in.
