

HEAVYWEIGHT DIAMOND SAFETY FENCE SPECIFICATIONS:

Our highly durable heavy diamond "chain-link" style safety fence provides a price-effective solution for creating barriers in a variety of environments. It is ideal for short-term, long-term or repetitive use! Unlike metal, it does not corrode or conduct electricity and is safer to handle than metal because of its smooth extruded construction.

Additional sizes and colors can be special ordered.

Mesh Opening: 1-3/4"

Tensile Range: 1600 - 2200 PSI

Ultimate Tensile Range: 1800-2200 PSI

Impact Load Range: 3.5 – 4.5 Foot Lbs

Elongation At Break: % 600%

Why is it "rimless?"

Some people call it "rimless," some call it "rough top." We don't manufacture our heavy-weight fence with a "rim," because it simply doesn't need it to stand up to the competition. We put the extra weight usually found in the rim into the body of our product. Our customers love our HD safety fence because of its stability, durability and UV resistance!

NOTE: Information here is proposed as a result of our experience based on real information obtained in a laboratory and does not provide warranty, implicit or explicit, of the results obtained by the user who in all cases needs to prove use of the product in their own plant to determine the application parameters according to his particular requirements of experience and process conditions.
