

M-1 Universal Adhesive/Sealant

- **Polyether technology—Construction Power!**
- **High Performance under field conditions**
- **Versatile—works just about everywhere**

Universal, all purpose: An indispensable tool

M-1 can perform as both an adhesive and a sealant. It adheres to a wide range of construction materials including

PVC, EPDM, most metals, wood, glass, masonry concrete, fiberglass and solvent-sensitive foams so it is works in almost any situation requiring a sealant.* Yet it delivers nearly 400 psi shear strength and remains elastic after cure—up to 525% elongation, so it also performs as a structural adhesive.

- Because it is a polyether, M-1 delivers many features useful to building contractors and roofers:
- Non-shrinking—many adhesives and sealants lose 40% volume due to evaporation
- No solvents – non-toxic – no odor – no risk to human health
- Applies down to 32°F/0°C
- Continuous service at 200°F/93°C
- Effective on damp surfaces
- Skins over in 30 minutes
- Paintable
- UV stable

M-1 Covers the Building Envelope

Commercial Roofing: Repair of flashing and coping joints, sealing reglet joints and termination bars, night seals around penetrations, bonding walkway treads and just about any type of emergency roof repairs.

Residential Roofing: Chimney and step flashing, skylights, roofing details, cove joints.

Penetrations: Sealing pipe, cable, conduit penetrations through walls and roofs.

Walls, windows, doors: Masonry and curtain wall construction.

Lightning protection: Bonding grounding cables

Solar: Mounting solar panels, assembling components, waterproofing power distribution

Masonry and concrete: Crack repairs, horizontal and vertical expansion joints, bonding metal brackets

Mechanical: Sealing ducts, insulation, flanges and piping

Patching a leak as part of a 3-course flashing repair
