

## INSTALLATION NOTE

### Inserting The Guide Feed

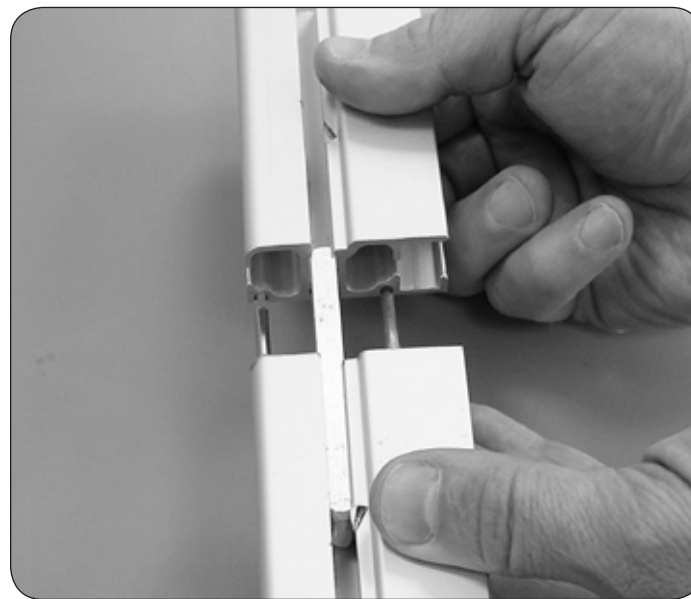

The guide feed serves as the stop for the cover. No other stop is required for this system. Notice that the tab on the guide feed now extends **into** the slider channel. Secure the guide feed with the bolt and nut included with the hardware.

## INSTALLATION NOTE

### Splicing #403 Cover Guides Together

The 403 under guide incorporates one rectangular splice and two 1/8" alignment splice rods. The rods will create a more precise alignment in the final installation. The rods are made to be tight in the holes so that there is no sway in the guide joints when installed.

## INSTALLATION NOTE

### Inserting End Pulley into #403 Cover Guide

This pulley assembly is inserted in the end of the guide. You may need to squeeze the two halves of the tab together to slide them in.
