

Structured Spill Containment Solutions

Your Trusted Partner in Spill Protection and Safety

 **Justrite**®

EAGLE®
Justrite Safety Group

Justrite and Eagle structured spill containment solutions provide unparalleled protection and peace of mind for facilities managing hazardous materials. Designed for demanding environments, they offer reliable, rigid containment for chemicals, oils, and other substances, preventing leaks and minimizing environmental impact.

**Invest in uncompromising safety, compliance,
and performance with Justrite and Eagle.**

Why Justrite and Eagle Stand Out: Our Unique Advantage

Proven Reliability and Exceptional Durability:

Our products are crafted from high-density polyethylene (HDPE), ensuring long-lasting performance and exceptional chemical resistance while meeting the highest industry standards for reliability.

Global Reach and Reliable Distribution:

With a global presence and an extensive distribution network, Justrite and Eagle efficiently serve customers worldwide, ensuring timely delivery and support no matter where your operations are located.

Advanced Manufacturing Excellence:

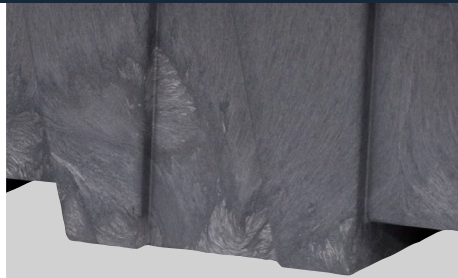

Our advanced injection molding process enables precise design control, resulting in seamless, high-strength spill containment solutions with superior impact resistance, structural integrity, and lightweight handling for quick deployment and proven durability in demanding environments.

Features and Benefits

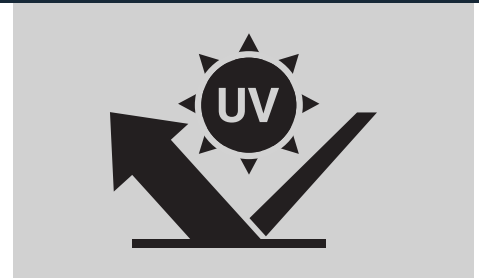

DURABILITY

Designed for high-capacity containment to prevent overflows and ensure workplace safety.

Constructed with premium high-density polyethylene (HDPE) for superior durability and resistance to harsh chemicals.

Feature integrated UV protection for dependable performance in outdoor environments.

EASE OF USE

Space-saving, nestable designs reduce storage costs and improve handling flexibility.

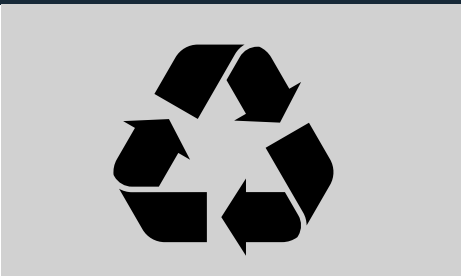

Low-profile design and ramp ensure easy drum loading onto the containment surface.

Removable grating simplifies cleaning and maintenance.

SAFETY AND COMPLIANCE

Incorporate post-consumer material to reduce waste and promote sustainability.

Ensure compliance with EPA spill containment standards.

Protect waterways by ensuring full adherence to SPCC regulations.

VERSATILITY

Extensive portfolio ensures the perfect spill containment solution for every need.

Private labeling available to align with your brand and operational requirements.

Modular design enables expansion to meet volume requirements while maintaining efficiency.

What to Look for When Selecting a Structured Spill Containment Solution

Considerations

Justrite and Eagle Benefits

What type of material is used?

- Made from 100% high-density polyethylene (HDPE) for superior durability, ideal for industrial applications.
- HDPE provides exceptional protection against a broader range of chemicals, ensuring long-lasting performance.

What type of construction process is used?

- We use an injection molding process to produce products with enhanced strength, durability, and impact resistance while remaining lightweight for easy handling.

What is the total containment capacity?

- Justrite and Eagle spill containment solutions offer industry-leading capacity ratings, ensuring compliance by containing 110% of the largest container's volume.

Are there options for expanding the containment solution as my needs change?

- Justrite and Eagle offer modular spill containment platforms that can be easily interconnected to fit your changing needs and available space.

Can the solution safely support the weight of the materials I need to store or contain?

- Justrite and Eagle spill containment solutions are built with high load capacities and durable HDPE construction to safely support heavy materials.
- HDPE maintains rigidity and resists stress, minimizing the risk of overloading and damage, unlike LDPE, which can deform under heavy loads.

What is the expected lifespan under normal operating conditions?

- Justrite and Eagle spill containment solutions are designed for a 10-year lifespan in demanding environments.
- LDPE-based products can deteriorate under load or impact, resulting in warping, cracking, and a much shorter lifespan.

Are the products resistant to UV rays, weathering, and temperature fluctuations?

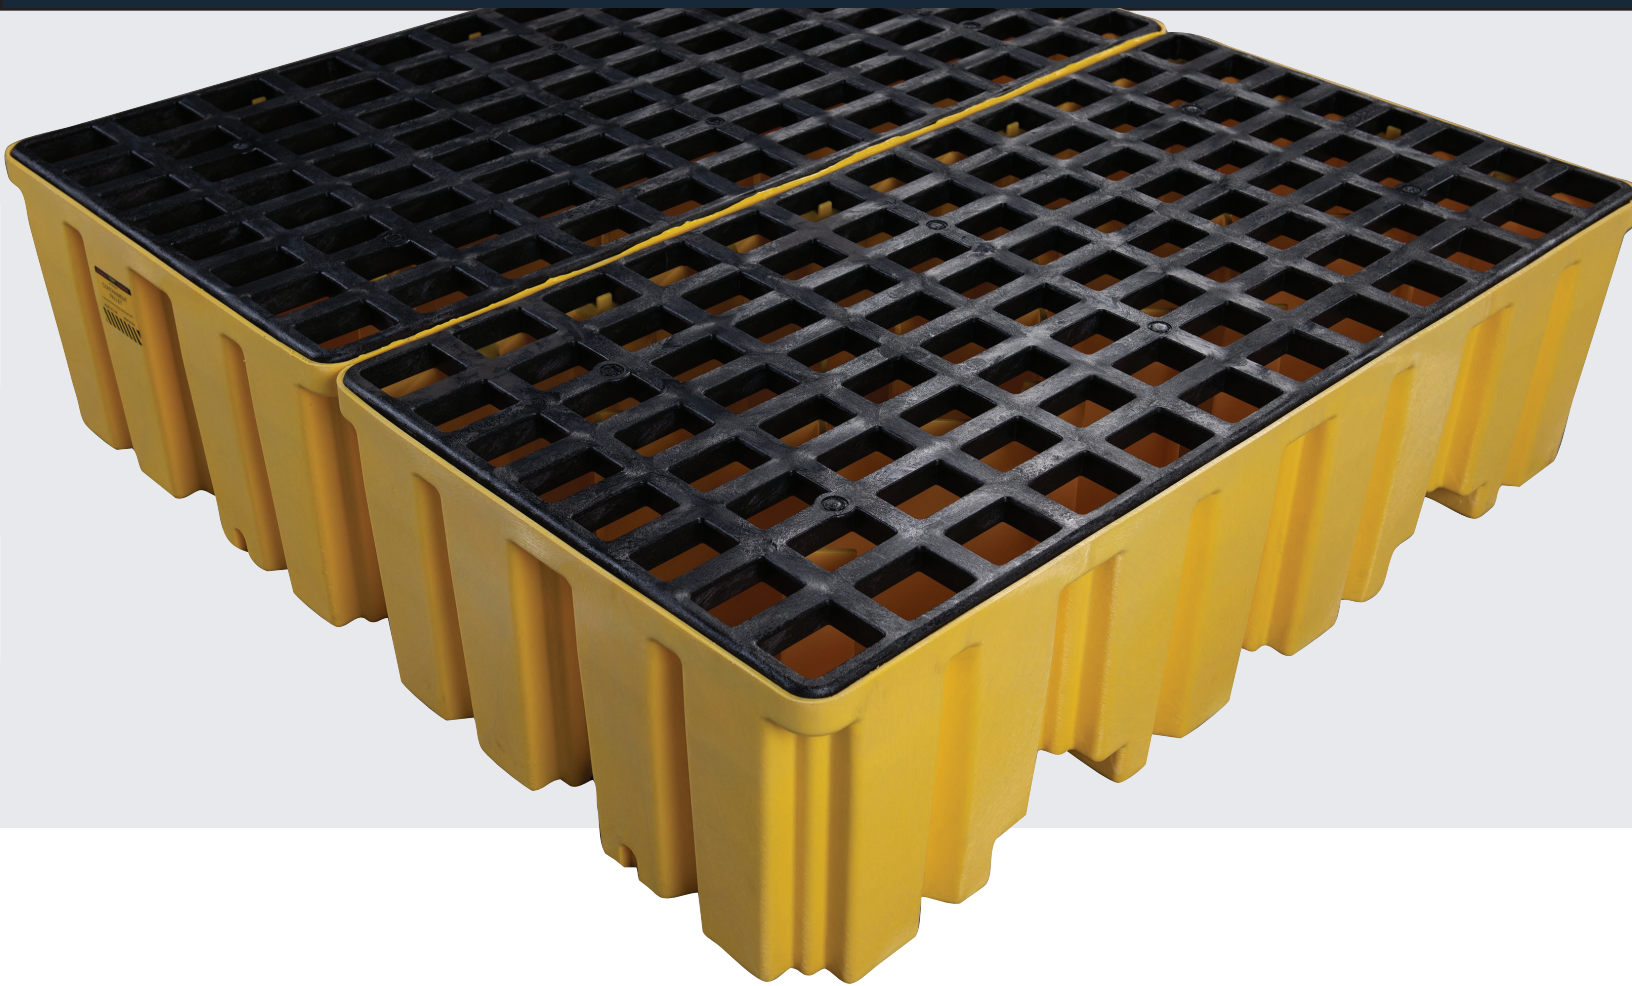

- Our solutions are designed to maintain their strength and performance even under harsh outdoor conditions.
- In contrast, LDPE products can become brittle or lose structural integrity over time when exposed to sunlight, weather, and extreme temperatures.

Are the products designed for easy handling and nestable storage?

- Many models are nestable, reducing storage space requirements and shipping costs.
- Most models also feature forklift pockets for easy relocation and handling.

Justrite and Eagle Structured Spill Containment Solutions

Exceptional Value in Total Cost of Ownership

Cost Efficiency & Durability

- **32% lower total cost of ownership** compared to leading competitors, driven by superior resistance to structural damage and chemical degradation
- **50% longer lifespan**, reducing replacement costs and extending the life cycle of your investment

Reduced Downtime & Maintenance Costs

- **35% less time and cost** spent on inspections, ensuring ongoing compliance and optimal functionality
- **55% reduction replacement part costs**, thanks to enhanced durability and resistance to wear and tear

Regulatory Compliance & Financial Protection

- Ensure full **EPA and SPCC compliance**, helping you avoid fines of up to \$16,000 per violation per day plus penalties
- Minimize the risk for cleanup expenses and legal fees, which can exceed **\$200,000** for remediation and litigation costs

Operational Efficiency & Risk Reduction

- Prevent **property damage** from spills and chemical corrosion, reducing costly repairs to your equipment and infrastructure
- Avoid **inventory losses** and **production delays** caused by contaminated materials or operational disruptions from spills

Quality, Innovation, and Craftsmanship You Can Trust

Comprehensive Spill Containment Solutions

Justrite and Eagle provide a wide range of products designed to meet every spill containment need. From spill pallets and drum management systems to IBC containment, spill trays, and accumulation centers, our solutions ensure you'll find the perfect fit for your safety and compliance requirements.
