CONCRETE PAVERS & TILES

A HANDCRAFTED ALTERNATIVE TO NATURAL STONE

FIREROCK

CONCRETE PAVERS & TILES

FireRock wet-cast concrete pavers and tiles are a handcrafted alternative to natural stone that is as beautiful as it is versatile. Ideal for both indoor and outdoor use, our product excels in independent tests of strengths, safety, and heat absorption.

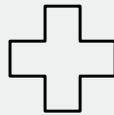

Our line of architectural-grade concrete pavers and wall tiles are available to ship in five standard colors and ten sizes, providing ample design possibilities. However, if your job requires custom work our team of experts is ready to meet your needs.

STRONGER

CONSISTENTLY OUTPERFORMS THE ASTM 1731 REQUIREMENTS

Time after time, in independent tests of strength, FireRock pavers significantly outperform the industry standard of 4000 psi.

SAFER

EXCEEDS ASTM 1731 STANDARDS FOR SLIP RESISTANCE

Per accredited 3rd party testing, FireRock concrete pavers exceed minimum standards for the Dynamic Coefficient of Friction (DCOF) by more than 45%.

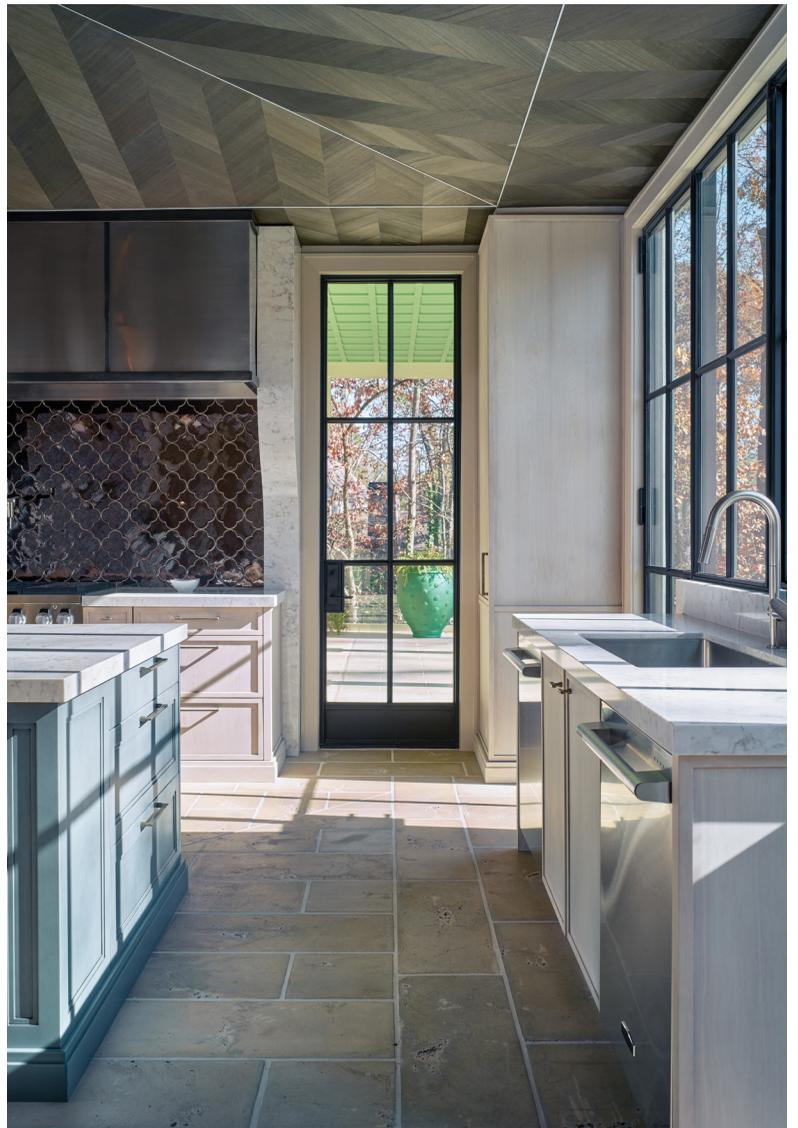

COOLER

HIGHER SOLAR REFLECTANCE THAN THE COMPETITION

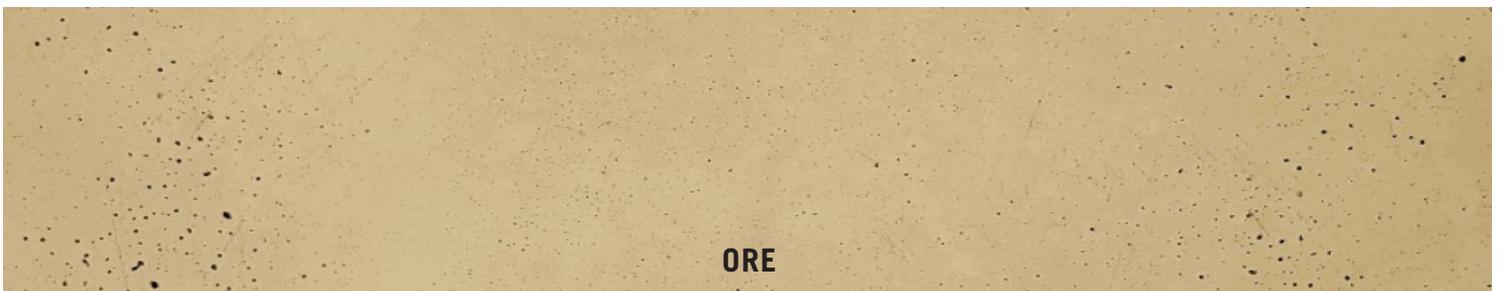

Solar Reflectance Index (SRI) is measured on a scale of 1-100. The higher the number, the cooler the surface will be after prolonged exposure to sunlight. Four of our five colors are above the LEED minimum 29, with Oyster averaging around 90.

For more detailed testing information, visit firerock.us

COLORS

We offer five unique standard colors to accommodate and blend naturally with any design plan.

FINISHES

MODERN

Modern pavers have a smoother finish that provides a cleaner, more sleek aesthetic. Rather than pitting, these pavers have a more consistent look to set the stage and let your home, landscaping, pool, Etc. be the star.

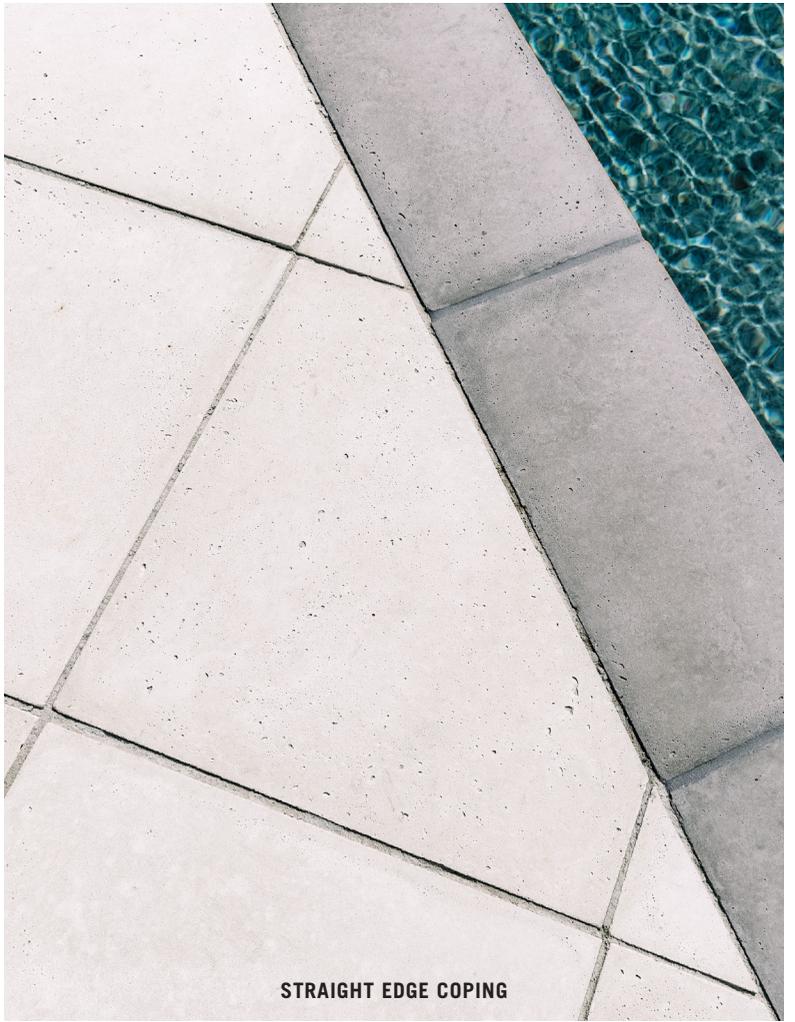

TRADITIONAL

The traditional finish is characterized by pitting and organic finish that is designed to blend into your home environment as natural stone products like travertine, bluestone, and limestone might. Our unique, handcrafted process adds depth and texture but with the consistency and performance of a manufactured product.
