

How to Install Liner Guard

Liner Guard is a one piece Geotextile liner pad that is designed to be installed quickly and easily. Please read all instructions completely before starting installation. These instructions are for your new pool installation.

Step 1: Clean the pool site as directed in your pool kit installation. Make sure you remove all rocks and other objects from the site that can damage the pool bottom. It may be necessary to use a tamping tool or sod roller to produce a smooth and level surface.

Important- It is strongly recommended that you lay sand down before installing the Liner Guard.

Step 2: After assembling your pool lay the Liner Guard down before installing the pools liner.

The Liner Guard is a one piece cover made in the same shape as your pool, and should fit easily on the inside of your pool. Should you have any excess it may be cut off to ensure the Liner Guard lays flat on the bottom of your pool.

Step 3: After making sure the Liner Guard is laid flat and smooth install your liner. Fill your pool with water.

We recommend that you also use Pool Cove for additional protection around the perimeter of the inside walls of your pool.

Failure to follow these installation instruction will void your warranty.
