PONDGEL

INTRODUCING PONDGEL: THE REVOLUTIONARY POND CLARIFIER

PondGel is a state-of-the-art pond clarifier that maintains and optimizes your water quality. It's non-toxic, self-dosing, self-limiting, and cost-effective, offering a superior pond care solutions compared to traditional treatment products.

REDUCES HARMFUL CHEMICALS & MAINTENANCE

REMOVES PHOSPHATES AND METALS

RESTORES & PRESERVES WATER CLARITY

What Makes PondGel Different?

Unlike other clarifiers, PondGel uses advanced two-stage gel flocculant technology based on particle charge and ion transfer. This process captures even the smallest particles in your pond water by taking advantage of their natural charge density. As particles with different charges pass through the water, PondGel interacts with them, binding them together into larger masses that are easily filtered out. These bound particles are then captured by your pond's filtration system or settle naturally in your pond.

- Proven fish safe
- Simple to use
- Self-dosing
- Non-toxic
- pH NEUTRAL
- A safer alternative to traditional cationic polymer flocculants.
- Clear water performance you can trust

PONDGEL

KEY BENEFITS OF PONDGEL

1. **Self-Dosing & Self-Limiting**
PondGel automatically adjusts to the particle load in your pond. It self-doses based on the amount of contaminants present in the water, helping reduce the risk of human error or overdosing. Because of this, operators don't need to manually measure or adjust the dosage.

2. **Charged Particle & Ion Transfer Technology**
PondGel utilizes ion transfer technology to bind particles together. The chemistry in the unit is attracted to the charged particles in the water and causes these particles to naturally bind together through particle collision and ion transfer. This creates larger particles that settle out or are easily captured by your filter. This unique approach ensures continuous removal of contaminants without the need for manual intervention.

3. **Metals and Phosphorus Removal**
In addition to clarifying the water, PondGel targets harmful or staining metals such as copper, iron, arsenic, and also phosphorus. By removing phosphorus, PondGel deprives algae of its primary food source, helping to prevent algae formulation and growth.

Installation is Easy! Simply place the PondGel in an area with moving water—such as near a waterwall, water feature, or where pumped water enters the pond. Continue your regular pond maintenance, and do not discard the PondGel unit until both sides of the diffuser are completely empty.

ABOUT PONDGEL

Our PONDGEL product is the result of rigorous scientific testing and successful real-world applications. PondGels are derived from Clearflow Group's Gel Flocculant line, which has been used for over two decades in highly regulated industrial applications. Using drinking water–safe chemistry, our patented technology creates a more effective, fish-friendly water treatment process.
