

flush mount
installation
from
Infratech

seamless. streamlined. stylish.

Our flush mounting option has long been a favorite among the interior designers and architects who develop today's most sought-after commercial and residential properties. A flush mounted Infratech heater can provide warmth without disrupting the décor of the space – the flush mount frame can be installed with the edges exposed, or can be covered by a drywall, plaster, stucco, or tongue-and-groove wood ceiling treatment. It is also easy to install and operate.

WHEN TO FLUSH MOUNT*

- Infratech's W-Series or WD-Series heaters may be flush-mounted
- Choose from two sizes: a 39" or 61" frame, and from wattages ranging from 2,000-6,000 watts, depending upon whether you're using a single or dual element heater
- Select an area with a flat ceiling and minimum 2" x 8" studs, where the heater can face straight down when recessed
- Avoid flush mounting the heater close to a ceiling fan or light fixture
- You will need to hire a licensed contractor in order to complete a flush mount and heater installation

* Heaters cannot be mounted on a sloped/pitched ceiling
