

Quick-Lock Polymer Wall Fasteners

Patent Pending

Quick-Lock Polymer Wall Fasteners

The Fastest Pool Wall Assembly Just Got Faster!

New snap and twist design

Insert the new bolt into the nut and push until it stops and twist. This new quick fastening feature is 35% quicker than the old screw nut and bolt design.

New composite material

The new fasteners are produced with a composite material that is stronger than the old nylon fasteners.

100% Corrosion Free

All fasteners are impervious to corrosion of any kind. This makes them ideal for acidic soil conditions and salt water systems.

One size fits all

The new fasteners will now fit all polymer panel and brace connections where a wedge is utilized. No need to order longer bolts. The fasteners work with the Graphex and Deluxe Polymer Wall systems (not available for the Elite wall system).

Ergonomic bolt head

This new design makes it easy to grab, push, and twist with your thumb and finger.

Tri-head nut

The new quick nut design has three side flanges to make it easier to hold and twist during installation.

Patented design

Only Latham has the exclusive quick fastener system making it yet another Latham innovation for the swimming pool industry.
