

WE COVER YOU YEAR ROUND

SOLAR BLANKETS

Heavy-duty polyethylene material works with the sun to catch and retain heat. Helps raise the water temperature by absorbing sunlight during the day and retaining the heat to extend the pool season. Keeps debris out of the pool reducing time spent cleaning. Savings come from a reduction in water evaporation, leading to lowered chemical usage. Material is highly resistant to ultra violet rays which extends product life. Available in standard and custom sizes, as well as a wide range of grades.

THE SPACE AGE™ PATENT NO. US 6,286,155 B1

The Space Age Solar Blanket collects heat from the sun's rays similar to other blankets, but The Space Age Solar Blanket collect otherwise lost heat by reflecting the sun's rays back into the pool with the special patented Aluminum underside.

- A. DIAMOND SPACE AGE™ SOLAR BLANKET
- B. BLUE/BLUE SOLAR BLANKET
- C. ULTRA CLEAR SOLAR BLANKET

WINTER POOL COVERS

Laminated polyethylene sheeting woven with thick, high-density polyethylene stitching ensures superior tensile strength and durability. All covers are treated to provide maximum resistance to damaging ultra violet rays to inhibit deterioration and increase longevity. In-Ground Pool Covers come with standard holding straps for water tubes, optional reinforced webbed border for additional strength and durability, and feature conveniently positioned, corrosion-resistant grommets. Aboveground Pool Covers feature a ratchet and cable system featuring high-test vinyl coated cable.

LEAF NET COVER

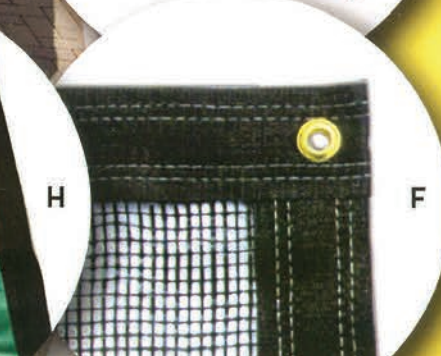

Lightweight, yet very tough. Prolongs the life of winter covers by trapping and facilitating the removal of leaves and other corrosive materials. Easily attaches to winter covers with grommets.

MESH COVER

Made of fine woven, polyethylene. This product allows water to pass through while trapping leaves, twigs and other debris. Lightweight, yet strong these covers can be used year round in more moderated climates for day-to-day maintenance or to serve as a trap to help protect your winter cover.
