## Technical Guidelines for Plaster Industry (NPC)

### Section 3.4

#### Thickness Tolerance:

The cementitious surface coating should have a minimum thickness of 3/8" and a maximum thickness of 3/4". Though thickness fluctuations exist across the cementitious surface coating, the majority of the cementitious surface coatings' thickness should remain within these tolerance levels. The Cementitious surface coating is not designed to have structural value.

## Plaster Coverage Rates

Pebble Finish = 200 sq. ft. @ 1/2" thickness

1,000 lbs batch = 1:1 Mix or 50% pebble to 50% cement

## Liquid Pigments

**Note:** These mixtures yield one batch. Sample colors shown are for visual representation purposes only. Actual product color should be checked prior to installation. Many materials used are products of nature and subject to natural variations in color, shade and texture. Materials and application techniques will result in unique variations, including color variation. Failure to follow batch formulas as directed will void any applicable warranty. All components of a batch formula must be purchased from an NPT® Pool Finishes distributor for limited warranty to apply. For warranty information see [www.nptpool.com](http://www.nptpool.com).
