

FLAGSTONE

FLAGSTONE is a sedimentary rock that is split into layers along bedding planes. The term describes flat pieces of natural stone that have been quarried and cut into various thicknesses.

Natural Stone Resources' collection of Flagstone includes a collage of unique colors made of Limestone, Quartzite, Sandstone, Slate & Travertine.

FLAGSTONE is a product that is widely used in landscaping projects, with designs ranging from organic basic to ornate and formal. The advantage is to create your own individual taste & style. If a modern design is desired, stick to a rigid repeat, establishing clean lines. A rustic look will require random shapes and irregular sizes.
