Plaza Stone Series

Plaza Stone is a timeless paving stone with an impressionistic embossed surface profile. It creates a gentle and warm effect by combining the soft curved edges of the rectangular and square stones. Plaza Stone is available in many colors and in standard or Heritage™ Series (tumbled) finish to accommodate the most discriminating tastes and desires. Plaza Stone uses large-scale patterns to create interest and drama to commercial landscaping, while the stone's texture and pattern harmonize with surrounding buildings and site furnishings.

COMPOSITION AND MANUFACTURE

Plaza Stone is made from a "no slump" concrete mix. Made under extreme pressure and high frequency vibrations, Plaza Stone has a compressive strength greater than 8000psi, a water absorption maximum of 5% and will meet or exceed ASTM C-936 and freeze-thaw testing per Section 8 of ASTM C-67. Heritage™ Series may not comply with ASTM C-67 freeze-thaw durability.

INSTALLATION

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 4 in. to 8 in. (101mm to 202mm) of compacted base for light vehicular and pedestrian traffic) or as otherwise directed by Site Engineer/ Architect/ Landscape Architect.
2. Place bedding course of washed sand conforming to the grading requirements of ASTM C-33 to a uniform depth of 1-1½ in. (25-38mm) screeded to the grade and profile required.
3. Install Plaza Stone with joints approximately 1/8 in. (3mm).
4. Where required, cut pave stones with an approved cutting device to fit accurately, neatly and without damaged edges.
5. Tamp pave stones with a plate compactor, uniformly level, true to grade and free of movement.
6. Spread sand to 1/8 in. (3mm) thickness over entire paving area. Heritage™ Series may require joint sand stabilization.
7. Make one more pass with plate compactor to fill joints with sand.

Complete installation & specification details are available by contacting your Pavestone Sales Representative.

Note: Colors are shown as accurately as possible in brochures & samples, but due to the nature of the product, regional color differences and variables in print reproduction, colors may not match exactly. For best results in maintaining color consistency, pavers must be installed from several cubes at a time. Efflorescence, a whitish, powder-like deposit, may appear on concrete pavers. This is a natural occurrence in any concrete product and will usually wear off over time.
