HOW TO PROTECT & CARE FOR NEW POOL TILES

CAL BLOCK

NANO FORMULATION TECHNOLOGY

Spray on and let dry CAL BLOCK all over any new pool tiles, glass, stone, metal, rock water features, concrete, basically any surface in and around the pool/spa that will get wet & dry at any time.

★ This will reduce calcium/scale build up and will prevent any calcium/scale from permanently bonding to any treated surface allowing it to be easily removed without causing any damage to your tiles.

★ Cal Block will keep your tiles, ect. From damage caused from calcium/scale like etching and gloss & color fade.

★ Apply every 4-6 months to keep your investment looking like new for years to come. Apply to clean dry surfaces, cleaning the surface each time before re-application.
