DIVING BOARDS 101

When combined, diving boards and stands create unique performance characteristics. The most notable performance characteristic is "Flex" which means the flexing action that takes place between the board and stand. Board and stand combinations are defined in two ways, according to their level of flex:

JUMP BOARDS—a flexible board on a base that utilizes a spring mechanism

DIVING BOARDS—a flexible board on a rigid base

The diving board and stand selector chart below provides a visual reference guide to compatible boards and stands and their corresponding performance category.
