

10" LIGHT COMPATIBILITY — FITS ALL MAJOR NICHE TYPES

ENGINEERED TO INSTALL SEAMLESSLY INTO
EXISTING INDUSTRY-STANDARD NICHE TYPES

Gunite Niche

Perfect for Gunite/Concrete pools

- Compatible with standard 10" gunite-style niches used across major brands
- Installs at the proper depth and setback for optimal beam distribution
- Works with standard 1" conduit entries for cable routing
- Designed to lock into existing mounting points within the gunite niche

Fiberglass Niche

For Fiberglass Pools and Spas

- Fits common 10" fiberglass light niches with flush-mount front rims
- Light secures cleanly to the niche ring for a seamless, low-profile finish
- Designed to accommodate typical fiberglass wall thicknesses
- Corrosion-resistant hardware ensures long-term stability

Vinyl Niche

For Vinyl Liner Pools

- Compatible with industry-standard 10" vinyl niches equipped with gasketed faceplates
- Compresses evenly against liner pack-outs for a reliable watertight seal
- Snap-in mounting interface aligns with typical niche brackets used in liner pools
- Works with the same fastening pattern as most vinyl-liner 10" fixtures

Universal Installation

The AquaColors 10" is engineered to install into the most common 10-inch niche designs already used in the pool industry, making upgrades or replacements fast, predictable, and contractor-friendly — without requiring a proprietary niche.

AQUACOLORS POOL LIGHT | 10"

ENGINEERED FOR MAXIMUM HEAT DISSIPATION

Direct-to-Water Thermal Design:

The high-power LED board is mounted directly onto a solid stainless-steel heatsink, allowing heat to conduct efficiently and directly into the surrounding pool water.

Superior Thermal Stability:

Because the heatsink is in direct thermal contact with the water, heat is removed continuously and naturally during operation. This keeps the LED junction temperature far lower than sealed plastic housings that trap heat inside.

Enhanced LED Longevity:

Lower operating temperatures reduce thermal stress on the LED core, helping maintain brightness and color quality over years of use. The design supports consistent performance even during extended runtime.

Marine-Grade Construction:

The stainless-steel 316 heatsink not only improves cooling efficiency but also provides corrosion resistance and long-term durability in chlorinated and saltwater environments.

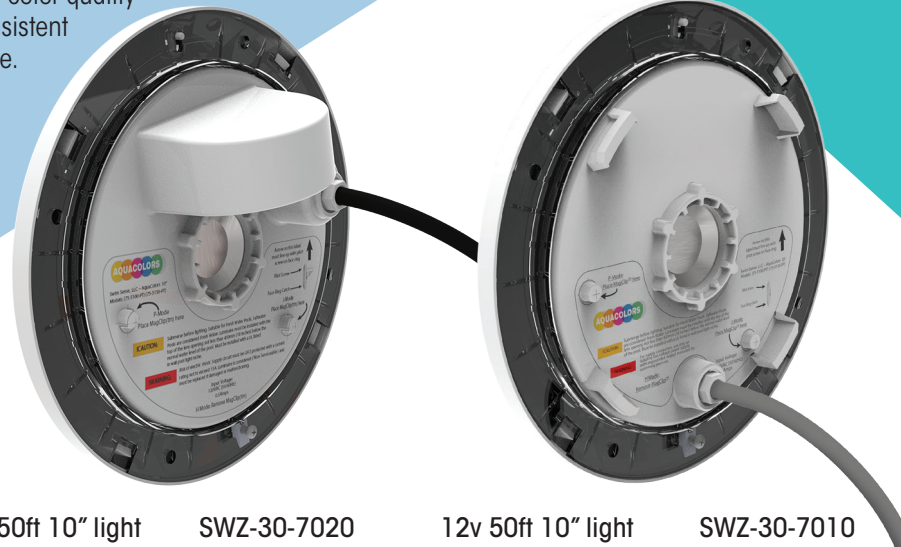

HIGH LUMEN OUTPUT

Powerful LED Core:

- Available in a high-output 5000-lumen white model and a vivid 2300-lumen RGBW version, the AquaColors 10" delivers exceptional illumination while maintaining excellent energy efficiency.
- Paired with its balanced optical design, the beam is evenly distributed across the pool floor and walls, providing consistent, uniform lighting throughout the entire pool.

Synchronizes to and
controlled from
industry-standard
equipment.

CHANGING THE LIGHTS' PROGRAM IS EASY WITH MAGCLIP™

AquaColors MagClip™ makes changing the lights' program much simpler. Place the MagClip™ to the left or right or remove it, allowing for easy selection between P, J, and H modes.

MagClip™ is not available with white only lights.
