

Direct Controller Interface (DCI)

Designed for the Following Irrigation Controllers:

Irritrol® Dial & MC Controllers

Hunter® ICC & PRO C
Controllers

Rainmaster® Controllers

Designed for specific controllers, a DCI is the ideal addition to your TRC Commander or Sidekick system. Easy installation and simple operation make it the commercial contractors ultimate labor-saving solution for wireless controller operation. A DCI combined with a Universal Receiver allows the operator to control operation at any time without having to approach the controller. The DCI converts the control logic of the Universal Receiver to match the control logic of the controller. This expands the capability of the TRC Commander or Sidekick to operate as many stations as the controller has available, rather than limitations of 12, 24, or 32 stations. Backed by a ONE YEAR limited warranty, Remote Control Technology's DCI's are designed to provide the irrigation professional with years of trouble free service.
