

#SPLRWIDETABLE: Ripple Wide Table with Umbrella Hole

PLEASE READ BEFORE INSTALLATION

- Table does not support or secure an umbrella.
- You must have an umbrella sleeve in the floor of your pool or patio that secures the umbrella.
- If your umbrella has side-to-side movement when inserted into your umbrella sleeve this table will not stabilize your umbrella and the table will move when your umbrella moves.
- Allows for an umbrella pole of 2" diameter or less.
- This is a 2-piece table with a removable top tray. The top tray is not designed to be removed when an umbrella is inserted.
- This table works in water depths up to 10".

Required pre-existing umbrella sleeve

INSTALLATION & REMOVAL INSTRUCTIONS

- Turn off fountains and bubblers so you can see the umbrella sleeve more clearly during install.
- Align the top hole directly over the umbrella sleeve in the floor of your pool.
- Carefully lower the umbrella pole through the tabletop and try not to make contact with the table so the top hole stays aligned with the umbrella sleeve. A second person is helpful so they can secure the table while the umbrella is placed through the hole.
- A second person can slightly lift the table while the umbrella is being inserted so they can help to guide the umbrella pole into the sleeve.
- To remove the table lift the umbrella, then lift the table from the pool and the water will release.
- If water is trapped in the bottom inner ring after removal from the pool: Remove the top tray and then turn the table upside down so the water can drain out of the center hole.
